Re: Doyle Systems Letter of Recommendation

To Whom It May Concern,

Kindly accept the following letter of recommendation for Mr. Chris Doyle and Doyle Systems, LLC.

I have known Mr. Doyle for 6 years. Mr Doyle and I have worked on some technically and logistically complicated projects together for the World Bank in Washington D.C.

The list of projects that we have worked on together include:

- World Bank, Main Complex, Cooling Tower addition – Addition and integration of three - 900 ton cooling towers to supplement the existing 5,400 ton cooling tower plant.
- World Bank – 'J' Building Humidification systems replacement – Replaced wet media type humidification systems on two 100,000 CFM air handling units with gas fired steam injection humidification.
- World Bank – Main Complex and 'H' Building Diesel Fuel Oil Monitoring systems – Integration of diesel fuel oil leak monitoring and heat detection along the entire length of fuel oil piping in both the Main Complex and 'H' buildings.
- World Bank – 'I' Building Fan Coil Unit Replacement - Phased replacement of perimeter fan coil units and chilled water risers in the World Bank 'I' Building.

All the projects listed above were completed in occupied buildings and accomplished with successful coordination and in conjunction with the design team and building owner's representatives.

In my experience, he and his staff are hard working and dedicated to quality and integrity. They are able to keep the clients' interests in mind while completing challenging projects under sometimes difficult schedules and circumstances.

I highly recommend Mr. Doyle, and Doyle Systems, to provide services for the World Bank Headquarters buildings in Washington D.C.

If I can provide you with any additional information in your consideration of Mr. Chris Doyle and Doyle Systems, please feel free to contact me.

Sincerely,

Robert Hermstein, P.E., LEED-AP, ASHRAE-HBDP
